...
```

First line starts with “>” header or “Comment”; used as a summary/description, often starting with unique accession/identifier

Subsequent lines contain sequence

- Interleaved: sequence broken into multiple lines of characters
- Sequential: entire sequence on a single line

Multiple sequence FASTA obtained by simply concatenating multiple FASTA records together

Fastq – format for representing raw sequence – base calls and quality values

Quality values - Phred scores and ASCII glyphs

| Phred Q | Probability (P) of Wrong Base | Base Call Accuracy | Sanger "Q + 33" Shift | Sanger "Q + 33" Shift ASCII glyph |
|---------|-------------------------------|--------------------|-----------------------|-----------------------------------|
| 0 | 1 | 0 | 33 | ! |
| 1 | 0.794 | 0.206 | 34 | " |
| 2 | 0.631 | 0.369 | 35 | # |
| 10 | 0.1 | 0.9 | 43 | + |
| 20 | 0.01 | 0.99 | 53 | 5 |
| 30 | 0.001 | 0.999 | 63 | ? |

Encoding History:

- Sanger Format (shown above): Q of 0 to 93 using ASCII 33 to 126
 - Sanger data, SAM format, Illumina 1.8+
- Solexa/Illumina 1.0: Q of -5 to 62 using ASCII 59 to 126
- Illumina 1.3 to 1.8: Q of 0 to 62 using ASCII 64 to 126
- Illumina 1.5 to 1.7: Phred scores 0 to 2 have a slightly different meaning
- Illumina 1.8+ -> Sanger Format

GFF/GTF - representing sequence features

- GFF – General/Generic Feature Format; Gene Finding Format
 - Two versions in wide use
 - GFF2 (see also GTF)
 - GFF3
 - Added formal support for multiple levels (and direction) of hierarchy (e.g., gene -> transcript -> exon)
- GTF – Gene Transfer Format
 - An extension of GFF2
- GFF2, GFF3 and GTF are all tab-separated files with 9 fields
 - Differing content in 9th column

GFF/GTF – general structure

General GFF structure

| Position index | Position name | Description |
|----------------|---------------|---|
| 1 | sequence | The name of the sequence where the feature is located. |
| 2 | source | Keyword identifying the source of the feature, like a program (e.g. Augustus or RepeatMasker) or an organization (like TAIR). |
| 3 | feature | The feature type name, like "gene" or "exon". In a well structured GFF file, all the children features always follow their parents in a single block (so all exons of a transcript are put after their parent "transcript" feature line and before any other parent transcript line). In GFF3, all features and their relationships should be compatible with the standards released by the Sequence Ontology Project . |
| 4 | start | Genomic start of the feature, with a 1-base offset . This is in contrast with other 0-offset half-open sequence formats, like BED files . |
| 5 | end | Genomic end of the feature, with a 1-base offset . This is the same end coordinate as it is in 0-offset half-open sequence formats, like BED files . ^[citation needed] |
| 6 | score | Numeric value that generally indicates the confidence of the source on the annotated feature. A value of "." (a dot) is used to define a null value. |
| 7 | strand | Single character that indicates the Sense (molecular biology) strand of the feature; it can assume the values of "+" (positive, or 5'→3'), "-", (negative, or 3'→5'), "." (undetermined). |
| 8 | phase | phase of CDS features; it can be either one of 0, 1, 2 (for CDS features) or "." (for everything else). See the section below for a detailed explanation. |
| 9 | Attributes. | All the other information pertaining to this feature. The format, structure and content of this field is the one which varies the most between the three competing file formats. |

https://en.wikipedia.org/wiki/General_feature_format

Ensembl GTF example record

Example of attributes string:

```
gene_id "ENSG00000279973"; gene_version "1"; transcript_id "ENST00000624155"; transcript_version "1";  
exon_number "1"; gene_name "BAGE5"; gene_source "ensembl"; gene_biotype "protein_coding"; transcript_name  
"BAGE5-201"; transcript_source "ensembl"; transcript_biotype "protein_coding"; tag "basic"; transcript_support_level  
"1";
```

Note: there will be many GTF records/rows per transcript per gene (UTRs, start_codon, exons, etc)

We are on a Coffee Break & Networking Session
