

RNA-Seq Module 1: Indexing

Arpad Danos, Felicia Gomez, Obi Griffith, Malachi Griffith, My Hoang, Mariam Khanfar, Chris Miller, Kartik Singhal Advanced Sequencing Technologies & Bioinformatics Analysis November 5-19, 2023

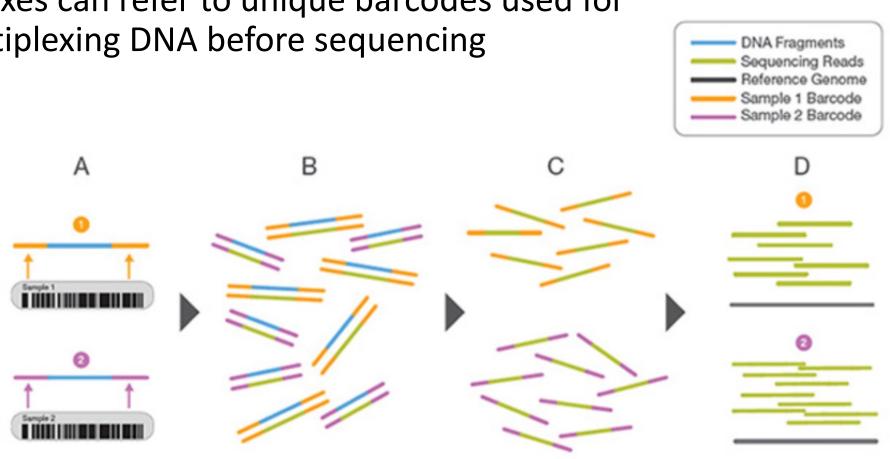

"Index" has many different meanings

• Indexes can refer to unique barcodes used for multiplexing DNA before sequencing

https://www.illumina.com/science/technology/next-generation-sequencing/multiplex-sequencing.html

Indexing in bioinformatics/CS enables rapid access

- Indexing is a recurring theme in genome analysis
- Files are *big* scanning through them can take a long time
- Indexing builds a table-of-contents so that we can jump directly to specific positions

- Indexing may require significant compute/time but typically only occurs once
- Each application may require a different indexing strategy

What's inside a fasta's index file? (.fai)

| | in contig | byte index of the file where the contig begins | bases per line | | bytes per line |
|-------------|-----------|--|----------------|----|----------------|
| contig name | | | | | bytes per inte |
| | | | , | | |
| chr1 | 24895642 | 2 6 | 60 | 61 | |
| chr2 | 24219352 | 9 253105708 | 60 | 61 | |
| chr3 | 19829555 | 9 499335802 | 60 | 61 | |
| chr4 | 19021455 | 5 700936293 | 60 | 61 | |
| chr5 | 18153825 | 9 894321097 | 60 | 61 | |
| chr6 | 17080597 | 9 1078885000 | 60 | 61 | |
| chr7 | 15934597 | 3 1252537752 | 60 | 61 | |
| chr8 | 14513863 | 6 1414539498 | 60 | 61 | |
| chr9 | 13839471 | 7 1562097118 | 60 | 61 | |
| chr10 | 13379742 | 2 1702798421 | 60 | 61 | |

Example index applications and associated files

| Source file | Indexed file | Indexing tool | Use case |
|-------------|--------------|----------------|--|
| .bam | .bai | samtools index | Visualize bam in IGV |
| .fasta | .fai | faidx | Extract specific sequences from ref genome |
| .vcf | vcf.gz.tbi | bgzip/tabix | Pull out specific variants |
| .bed | .bed.gz.tbi | bgzip/tabix | extract specific genomic regions |

Indexing is also essential for alignment

• Finding out where to place a read in the genome is impractical unless matches can be quickly found

- All read aligners use some kind of indexing
- These indices must be "built" once for a reference genome, but can then be used every time the aligner is run

 Different aligners use different indexing schemes that are not compatible
